unbreakable glass solutions

- 300 times stronger than glass
- Half the glass weight
- Security Class P8B (Security Class 3)
- Combines with wood, aluminium, steel etc
- Secured by Design License holder

## This is Hammerglass

Hammerglass is an anti-aging polycarbonate sheet, 300 times stronger than ordinary glass, and almost impossible to break.

With its unique silicon oxide coating (which can be compared to a glass membrane) Hammerglass is particularly resistant to chemical and most acid attacks. Graffiti can also be easily removed.

The coating also provides 99.96% UV-protection meaning the panes don't age, or yellow, or change their optic quality in any other way over time.

Hammerglass does not contribute to flames spreading during a fire.

Complete store fittings in patina-treated steel

Display cabinet with sliding Hammerglass sheets

## Safer working environment with security enclosure

Is safety paramount but space limited? A Hammergeglass security enclosure takes up minimal space but provides essential safety. This is an investment in a secure environment that benefits both customers and employees.

Hammergeglass is assembled in specially designed security panels featuring materials that harmonize with the rest of the store.

Hammergeglass - No more broken windows

Hammergeglass can be joined for large store windows

Secured storefront - exposed around the clock without ugly grids or shutters

## Hammergeglass - The invisible shutter

Ever since 1993 we have protected hundreds of stores against burglary and vandalism by making shop windows even more secure. We offer Add-On solutions, insulation glass and replacement of single glazing. Hammergeglass can also be joined to match large window dimensions.

Hammergeglass single 8 mm glass comes with Security Class P8B according to EN-356, which corresponds to Security Class 3 for grilles and shutters. However, Hammergeglass leaves your window display on view 24 hours a day.

Insurance companies recommend Hammergeglass.
